## EDUCATION

**CVR College of Engineering** *Jul 2024 – Present*
*Bachelor of Technology (B.Tech), Computer Science & Engineering; CGPA: 8.49 / 10* *Hyderabad, India*

## TECHNICAL SKILLS

**Languages:** Java, Python, JavaScript, TypeScript, SQL
**Frontend:** React, HTML5, CSS3, Tailwind CSS, Bootstrap
**Backend:** Node.js, Express.js, FastAPI, REST APIs
**Databases:** MongoDB, Redis, SQLite, ChromaDB
**Tools & Platforms:** Docker, Git, GitHub Actions, CI/CD, BullMQ, scikit-learn
**Core CS:** Data Structures & Algorithms, OOP, System Design, Database Design, Database Optimization, Operating Systems

## EXPERIENCE

**OpenMRS Core (Healthcare Platform)** – *Backend Contributor* *Mar 2026 – Apr 2026*

- Contributed production-ready Java backend code to OpenMRS Core, improving database performance, reliability, and data consistency.
- Refactored *archiveVoidedObs* to use bulk SQL operations (INSERT...SELECT, DELETE), eliminating N+1 queries and improving batch archiving performance.
- Implemented idempotent, retry-safe archiving with NOT EXISTS guards and safe deletion logic, preventing duplicate processing and recovering cleanly from partial failures.

## PROJECTS

**ARIA – Repository Intelligence Agent** | Link *Jun 2026 – Sep 2026*

- Engineered a repository intelligence platform that parses source code into ASTs, builds symbol indexes and dependency/call graphs, and serves hybrid semantic retrieval for automated codebase analysis.
- Implemented impact analysis, PR risk scoring, repository chat, and MCP integration over a FastAPI backend with SSE streaming.
- Added multi-provider LLM failover and production observability to improve service fault tolerance, and containerized the services with Docker.
- Backed the platform with 2,780+ automated tests covering the parsing, retrieval, and API layers.

***Technologies:*** *FastAPI, Python, ChromaDB, Qdrant, React, TypeScript, Astro, Docker, Tree-sitter, NetworkX*

**DevTrack – Developer Productivity Platform** | Link *Apr 2026 – May 2026*

- Built a full-stack platform integrating LeetCode, Codeforces, CodeChef, and GitHub through REST APIs to power DSA analytics, project management, resume intelligence, and career readiness tracking.
- Designed a modular backend of 23 domain modules and 60+ MongoDB schemas, with Redis caching and 6 BullMQ worker types handling asynchronous processing.
- Implemented authenticated REST APIs and SSE-based real-time updates, keeping dashboards in sync without client polling.

***Technologies:*** *React, TypeScript, Express.js, MongoDB, Redis, BullMQ, Docker*

**Phishing Website URL Detection** | Link *Jan 2026 – Apr 2026*

- Developed a Chrome Extension and Flask REST API that extracts 58 URL features and classifies phishing URLs with sub-15 ms local inference.
- Automated a feedback-driven retraining pipeline that updates training data, retrains the classifier, and hot-reloads the deployed model without server downtime.

***Technologies:*** *Python, Flask, Scikit-learn, Pandas, NumPy, JavaScript, HTML/CSS, Chrome Extension API*

## ACHIEVEMENTS & CERTIFICATIONS

- Top 10% globally on LeetCode (contest rating 1767); solved 400+ Data Structures & Algorithms problems.
- Top 1% Contributor, GirlScript Summer of Code (GSSoC) 2026 | Production Contributor, OpenMRS Core.
- Oracle Certified Foundations Associate – Agentic AI, Oracle University, Aug 2026.
